Innovation Hubs — attendee registration flows

A visual guide to what an attendee sees from first invitation through response.

Executive summary • A recurring Hub uses a public interest form first, then a no-login meeting RSVP link. A One-Off event goes directly to a private invitation/RSVP link and does not use public registration.

The image shows a registration form titled "Stakeholder Recurring mtiOq0mi" with the subtitle "QUARTERLY HUB REGISTRATION". Below the title, it says "Public registration for Stakeholder Recurring mtiOq0mi". The form contains three input fields: "Full Name" with the value "Jane Doe", "Work Email" with the value "jane@example.com", and "Company (optional)" with the value "Acme Corp". At the bottom of the form is a green button labeled "Register Interest".

Open Hub registration form

Representative UI captures use isolated test content; the screens and interactions are the actual application.

1. At a glance

The two attendee journeys are deliberately separated so recurring Hub membership and one-time event participation remain clear.

Experience	Recurring Hub	One-Off event
Starting point	Public registration link	Direct private invitation
Login to respond	No	No
Attendee record	Pending registration first; promoted later	Invited attendee record from the start
RSVP	Personalised recurring meeting RSVP	Personalised One-Off RSVP
Full workspace	Available after magic-link sign-in	Not part of the One-Off flow

The simplest explanation for an attendee: Hub registration says “I’m interested in joining this ongoing forum.” One-Off RSVP says “I’m responding to this specific event invitation.”

2. Recurring Hub registration flow

Step 1 — Open the registration link. An attendee opens a Hub-specific link shared by Kinetics. The page is public and does not ask them to create an account.

Open Hub registration form

Inline form validation

Step 2 — Submit interest. The attendee enters Full Name, Work Email, and optional Company, then selects Register Interest. Validation appears inline on the form; there is no popup.

Step 3 — See confirmation. The success card confirms Interest Registered. The attendee is not signed in and no login link is sent at this stage.

Registration confirmation

What happens next: the submission stays in the Hub's pending Public Registrations queue. When the Hub is ready, an administrator can promote the person into a meeting and send the meeting invitation.

3. Hub meeting invitation and workspace

Step 4 — Respond to the meeting invitation. Once invited to a recurring meeting, the attendee receives a personalised RSVP link. The response page is still no-login: the secure token in the link identifies the invitee.

The attendee chooses **I'll be there** or **Can't make it**. The page saves the response, updates the status banner, and allows the attendee to change their response later using the same link.

Step 5 — Optional sign-in for the full Hub workspace. The attendee can sign in through the magic-link page to access their recurring Hub workspace, including meetings, goals, suggestions, and invitations.

Popup/dialog note: the Create Goal dialog is an authenticated workspace interaction. Public registration and RSVP use full-page cards and inline feedback rather than modal popups.

4. One-Off event flow

Step 1 — Open the direct invitation. A One-Off attendee receives a private, personalised link. There is no public Hub registration form and no login requirement.

Step 2 — Read the invitation and respond. The page shows the event name, date, any invitation message, and the same two RSVP choices. After submitting, the response banner confirms Attending or Not Attending.

One-Off boundary: the attendee does not receive an automatic sign-in link. The token-only RSVP page is the intended experience for the event.

5. Mobile experience

Both public entry points are designed for links opened from email on a phone. Cards remain centred, fields remain full width, and RSVP actions stack vertically for easy tapping.

6. Popup and feedback summary

- Hub registration: no popup; inline required-field validation and a dedicated Interest Registered confirmation card.
- Recurring RSVP: no popup; selected response state, Saving your response... progress text, and a saved-response banner.
- One-Off RSVP: no popup; selected response state and a saved-response banner.
- Magic-link sign-in: no popup; the page changes to a Check your inbox confirmation state.
- Authenticated attendee workspace: modal dialogs are used for actions such as Create Goal.
- Invalid or expired links: a dedicated unavailable card explains that the link can no longer be used.

Takeaway for stakeholders: the attendee experience is intentionally low-friction. Public registration and both RSVP paths work without login; authentication is reserved for the richer recurring Hub workspace after someone has joined.

Prepared as a visual product brief for remote stakeholder review.
